

**Petroleum Professions on behalf of RISC invites candidates to apply for the position of**

- Job Title:** Principal / Senior Development Engineer
- Location:** Perth, Australia
- Description:** RISC is currently seeking a Development Engineer to join their consultancy with the combination of technical expertise and business perspective. This position requires an individual with a background in process, mechanical or project engineering with the ability to translate their technical knowledge to a business and commercial context.
- Experience:** Prospective candidates should have 15-20 years experience with an asset operator including development planning, preparation of capital and operating cost forecasts and development schedules and preparation of investment business cases. Experience in implementation of asset development projects or asset operation would be well regarded. The ability to work effectively in multi-disciplinary teams and interfacing with subsurface professionals is essential. The successful candidate will also be required to assimilate often conflicting information from multiple sources into a coherent argument or business case.
- Typical candidate would include oil and gas industry professionals seeking greater variety in their work and control over their career.
- Remuneration:** A salary package, competitive with the resources industry, will be offered based on the experience and qualifications of the successful candidate.
- Date Added:** July 15, 2009
- Contact:** Salome Soorma (salomes@petroleumprofessions.com)
